Scope 3 emissions screening

Summary: Lumenkvist Coatings AB should operate a documented scope 3 emissions screening that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Energy efficiency programme

Summary: Lumenkvist Coatings AB should operate a documented energy efficiency programme that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Renewable electricity sourcing

Summary: Lumenkvist Coatings AB should operate a documented renewable electricity sourcing that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Solvent emission control

Summary: Lumenkvist Coatings AB should operate a documented solvent emission control that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Water withdrawal management

Summary: Lumenkvist Coatings AB should operate a documented water withdrawal management that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Occupational health and safety system

Summary: Lumenkvist Coatings AB should operate a documented occupational health and safety

system that is owned by a named function, reviewed at least annually and reported publicly within its workforce and governance disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Lost time injury reporting

Summary: Lumenkvist Coatings AB should operate a documented lost time injury reporting that is owned by a named function, reviewed at least annually and reported publicly within its workforce and governance disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Chemical exposure monitoring

Summary: Lumenkvist Coatings AB should operate a documented chemical exposure monitoring that is owned by a named function, reviewed at least annually and reported publicly within its workforce and governance disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Contractor safety management

Summary: Lumenkvist Coatings AB should operate a documented contractor safety management that is owned by a named function, reviewed at least annually and reported publicly within its workforce and governance disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Working hours policy

Summary: Lumenkvist Coatings AB should operate a documented working hours policy that is owned by a named function, reviewed at least annually and reported publicly within its workforce and governance disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.

Living wage commitment

Summary: Lumenkvist Coatings AB should operate a documented living wage commitment that is owned by a named function, reviewed at least annually and reported publicly within its workforce and governance disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers.
