

Lumenkvist Coatings AB - Environmental Stewardship Report 2025

Greenhouse gas inventory

Lumenkvist Coatings AB should operate a documented greenhouse gas inventory that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Scope 3 emissions screening

Lumenkvist Coatings AB should operate a documented scope 3 emissions screening that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Energy efficiency programme

Lumenkvist Coatings AB should operate a documented energy efficiency programme that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Renewable electricity sourcing

Lumenkvist Coatings AB should operate a documented renewable electricity sourcing that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Solvent emission control

Lumenkvist Coatings AB should operate a documented solvent emission control that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Water withdrawal management

Lumenkvist Coatings AB should operate a documented water withdrawal management that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and

how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Environmental management system certification

Lumenkvist Coatings AB should hold a valid ISO 14001 certificate covering every production site, issued by an accredited certification body. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Wastewater treatment performance

Lumenkvist Coatings AB should operate a documented wastewater treatment performance that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Hazardous waste handling

Lumenkvist Coatings AB should operate a documented hazardous waste handling that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Packaging circularity

Lumenkvist Coatings AB should operate a documented packaging circularity that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Raw material traceability

Lumenkvist Coatings AB should operate a documented raw material traceability that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Biocide substitution plan

Lumenkvist Coatings AB should operate a documented biocide substitution plan that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and

reports its indicators against the 2023 baseline, verified by internal audit.

Volatile organic compound reduction

Lumenkvist Coatings AB should operate a documented volatile organic compound reduction that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Spill prevention and response

Lumenkvist Coatings AB should operate a documented spill prevention and response that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Product carbon footprint

Lumenkvist Coatings AB should operate a documented product carbon footprint that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Life cycle assessment practice

Lumenkvist Coatings AB should operate a documented life cycle assessment practice that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Climate transition plan

Lumenkvist Coatings AB should operate a documented climate transition plan that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. Lumenkvist Coatings AB should operate a documented climate transition plan that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. Lumenkvist Coatings AB should operate a documented climate transition plan that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The

approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Physical climate risk assessment

Lumenkvist Coatings AB should operate a documented physical climate risk assessment that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Biodiversity impact screening

Lumenkvist Coatings AB should operate a documented biodiversity impact screening that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Land contamination monitoring

Lumenkvist Coatings AB should operate a documented land contamination monitoring that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Noise and odour management

Lumenkvist Coatings AB should operate a documented noise and odour management that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Logistics emissions reduction

Lumenkvist Coatings AB should operate a documented logistics emissions reduction that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Supplier environmental audits

Lumenkvist Coatings AB should operate a documented supplier environmental audits that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Chemical substance inventory

Lumenkvist Coatings AB should operate a documented chemical substance inventory that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Microplastic release prevention

Lumenkvist Coatings AB should operate a documented microplastic release prevention that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Environmental incident reporting

Lumenkvist Coatings AB should operate a documented environmental incident reporting that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Environmental targets governance

Lumenkvist Coatings AB should operate a documented environmental targets governance that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Green chemistry research

Lumenkvist Coatings AB should operate a documented green chemistry research that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Air permit compliance

Lumenkvist Coatings AB should operate a documented air permit compliance that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.

Environmental data assurance

Lumenkvist Coatings AB should operate a documented environmental data assurance that is owned by a named function, reviewed at least annually and reported publicly within its environmental stewardship disclosures. The approach should state its scope across the Malmo and Gdansk production sites, the responsible owner, the measurable objective it serves and how progress is verified. Material changes should be approved by the executive team and communicated to staff and suppliers. In 2025 Lumenkvist Coatings AB reviewed this area and reports its indicators against the 2023 baseline, verified by internal audit.
